

CLAIMS

I claim:

1. A dust collection conversion device for converting a shop vacuum to collect dust produced while working on wood, the dust collection conversion device comprising:

a frame assembly being adapted for being coupled to a top of the shop vacuum, said frame assembly having a base member and a stanchion member, said base member being adapted for coupling to the shop vacuum, said stanchion member being coupled to said base member; and

an arm member being coupled to said stanchion member of said frame assembly, said arm member being adapted for coupling to a hose of the shop vacuum for directing the hose towards a work piece for vacuuming dust when the shop vacuum is turned on.

2. The dust collection conversion device as set forth in claim 1, further comprising:

said frame assembly having a coupling member, said coupling member extending through said stanchion member of said frame assembly, said coupling member pivotally coupling said arm member to said stanchion member for permitting said arm member to be pivoted with respect to said stanchion member of said frame assembly such that said arm member is adapted for directing the hose of the shop vacuum towards the work piece.

3. The dust collection conversion device as set forth in claim 2, further comprising:

said stanchion member of said frame assembly having a stanchion slot, said coupling member extending through said stanchion slot in said stanchion member for permitting positioning of said arm member along a portion of a length of said stanchion member.

4. The dust collection conversion device as set forth in claim 2, further comprising:

said arm member having an arm slot, said coupling member of said frame assembly extending through said stanchion member for permitting extension of said arm member along a portion of a length of said arm member.

5. The dust collection conversion device as set forth in claim 1, further comprising:

a plurality of clip members being coupled to said arm member, each of said clip members being positioned opposite said stanchion member of said frame assembly, said clip member being adapted for receiving the hose of the shop vacuum for aligning the hose along the length of said arm member.

6. A dust collection conversion device for converting a shop vacuum to collect dust produced while working on wood, the dust collection conversion device comprising:

a frame assembly being adapted for being coupled to a top of the shop vacuum, said frame assembly having a base member and a stanchion member, said base member being adapted for coupling to

the shop vacuum, said stanchion member being coupled to said base member;

an arm member being coupled to said stanchion member of said frame assembly, said arm member being adapted for coupling to a hose of the shop vacuum for directing the hose towards a work piece for vacuuming dust when the shop vacuum is turned on;

said frame assembly having a coupling member, said coupling member extending through said stanchion member of said frame assembly, said coupling member pivotally coupling said arm member to said stanchion member for permitting said arm member to be pivoted with respect to said stanchion member of said frame assembly such that said arm member is adapted for directing the hose of the shop vacuum towards the work piece;

said stanchion member of said frame assembly having a stanchion slot, said coupling member extending through said stanchion slot in said stanchion member for permitting positioning of said arm member along a portion of a length of said stanchion member;

said arm member having an arm slot, said coupling member of said frame assembly extending through said stanchion member for permitting extension of said arm member along a portion of a length of said arm member; and

a plurality of clip members being coupled to said arm member, each of said clip members being positioned opposite said stanchion member of said frame assembly, said clip member being

adapted for receiving the hose of the shop vacuum for aligning the hose along the length of said arm member.
